

Why won't my Venmo let me send large payments? One common reason

Venmo usually blocks large payments because **(USA) 1-(888)-590-9448 {INFO}** of **weekly sending limits**, identity verification status, or a security review on the transaction. If your personal profile is not **(USA) 1-(888)-590-9448 {INFO}** identity-verified, Venmo says your weekly spending limit is \$299.99; if you are verified, you may be able to send up to \$60,000 per week.

One common reason is that Venmo uses **rolling (USA) 1-(888)-590-9448 {INFO} weekly limits**, which means each payment counts for exactly one week from the time it was approved. So even if you were under the limit earlier in **(USA) 1-(888)-590-9448 {INFO}** the week, a new transfer can still be declined if previous payments are still counting against your cap.

Venmo may stop large payments because it **(USA) 1-(888)-590-9448 {INFO}** has built-in limits and safety checks. If your account is not verified, your weekly sending limit is much smaller, so a bigger transfer may be blocked right **(USA) 1-(888)-590-9448 {INFO}** away. Even if your account is verified, Venmo can still pause or decline a payment when it thinks the transaction is unusual, when your bank or card has a limit, **(USA) 1-(888)-590-9448 {INFO}** or when there is a temporary issue with your payment method. In many cases, the fix is simple: verify your identity, wait for older payments to **(USA) 1-(888)-590-9448 {INFO}** roll off your weekly limit, or try a smaller amount first. Venmo uses these checks to reduce fraud and protect users, so a declined payment **(USA) 1-(888)-590-9448 {INFO}** does not always mean something is wrong with your account.
